

## ABSTRACT OF THE DISCLOSURE

The present invention provides a displaying method, a display-processing device and a recording medium for organizing data, such as files and documents efficiently, so that the user can understand and maintain the organization easily. In the display-processing device in accordance with the present invention, each piece of data is endowed with a plurality (multi-dimensional) of hierarchical category attributes. The display-processing device displays the states of the hierarchical organization according to the respective category attributes by using tree style views indicating the corresponding hierarchical category attributes, side by side. Furthermore, when the user requests the system to display information with a combination of category attributes, by selecting one attribute from each tree view, the display processing device displays the list of requested information, such as the subject and the like of the data endowed with the selected category attributes.
